

Some notes on collaborating:

- To find a homework partner, you can utilize the course's Slack channel. There will also be a pinned post on Ed Discussion where you can post a comment if you are looking for a partner or respond to someone looking for a partner. Please use this pinned Ed Discussion post to facilitate partner search instead of creating your own thread.
- If using GitHub (or some similar cloud-based code management system) to share code, you must keep that repository private. Posting homework code publicly is an academic integrity violation.
- You are allowed to submit the same exact code as your collaborator, but if you'd rather just collaborate at a high-level to share ideas and submit different code, you can do that as well. **Please mention at the top of each file you submit if you are submitting the exact same code as your collaborator or if you are submitting code that differs in any way.**
- We will grade all students on the same rubric. You will not be graded more or less harshly if you choose to work alone or with another student.

Teammate sign-up:

- Please fill out the Team Signup Form (linked in the Homework 8 submission page) by the date indicated on the form to let us know whether or not you are collaborating for the homework assignment.
- Only one team member needs to submit the Team Signup Form.
- If you are working by yourself, please fill out the form and enter NA in the homework partner name/email fields.
- Please make sure that you are certain of your collaboration plans before submitting the form.
- Homework 8 and Homework 9 have different collaboration forms. Once Homework 9 is released, you will need to fill out that collaboration form even if you plan to work individually for both or are working with the same teammate for both assignments.
